

Meridian Property Group — Operations Automation Assessment

CLIENT	Meridian Property Group
PREPARED BY	KD Consulting
DATE	19 April 2026
STATUS	● Proposal

Opportunity

Meridian Property Group manages a portfolio of 340 residential and commercial tenancies across Southeast Queensland. The business runs on strong fundamentals, but operational bandwidth is a growing constraint: leasing coordinators spend the majority of their week on routine correspondence, manual data entry, and chasing approvals through email chains. This is work that AI and automation can largely eliminate.

KD Consulting proposes a focused **Operations Automation Assessment** — a two-week engagement to map current workflows, identify the highest-impact automation opportunities, and deliver a clear implementation roadmap. The outcome is a practical action plan, not a theoretical report. Meridian's team will finish the engagement knowing exactly what to build, in what order, and what it will take to get there.

How We Work

Our methodology is structured around rapid discovery and focused analysis. We do not run open-ended workshops or produce lengthy process documentation for its own sake. Every step is oriented toward the output: a prioritised set of recommendations the business can act on.

Deliverables

01

Workflow Assessment

A clear map of current operations across leasing, tenancy management, and communications — documenting where time is spent and where the significant friction points lie.

02

Automation Opportunity Register

A structured register of identified automation opportunities, each assessed for business impact, implementation effort, and integration requirements with existing systems.

03

Implementation Roadmap

A phased, prioritised action plan with recommended sequencing, indicative timelines, and investment estimates — ready to brief a delivery team or internal stakeholders.

This proposal is valid for 30 days from the date above. Prepared in confidence for Meridian Property Group.
